DECO / subtle decoration

exclusive shine

— Effect

Depending on the selected colour, glass effect frames glisten softly, adding elegance to the interior or attracting attention like jewellery.

transparent front
+ white rear

transparent front
+ black rear

Universal single transparent frames with glass effect are available with white or black bottoms, in versions from single to quintuple ones. It is possible to adjust the face of the frame individually to the interior design. In order to achieve it, insert additional element between the transparent frame and the bottom, where the additional element shall be appropriately cut, e.g. a coloured paper (density 80g/m²) or other element thick up to 0,1 mm.

Example textures which are available as templates in versions from single to quintuple, to be downloaded from www.karlik.pl, and then self printed and cut:
